Submitted (XXX-1992) to the EMBL/GenBank/DDBJ databases.
-!- Submitted (XXX-1992) to the EMBL/GenBank/DDBJ databases.
-!- EUNCTION: BAND 3 HAS TWO FUNCTIONAL DOMAINS: ITS INTEGRAL DOMAIN EDIATES A 1:1 EXCHANGE OF INORGANIC ANIONS ACROSS THE MEMBRANE, WHEREAS ITS CYTOPLASMIC DOMAIN PROVIDES BINDING SITES FOR CYTOSKELETALA AND OTHER PROTEINS (BY SIMILARITY).
-!- SUBUNIT: A DIMEN IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY AND APPEARS TO BE TETRAMERIC.
-!- SUBMIT: A DIMEN LOCATION: INTEGRAL MEMBRANE PROTEIN. IN THE BASOLAFERAL MEMBRANE OF INTERCALATED CELLS OF DISTAL TUBULES AND COLLECTING DUCTS.

Hubner S., Michel F., Rudloff V., Appelhans H.;
Ergequence of band-3 protein from rainbow trout
erythrocytes derived from CDNA.";
Blochem. J. 285:17-23(1992).

-1 FUNCTION: BAND 3 HAS TWO FUNCTIONAL DOMAINS: ITS INTEGRAL DOMAIN
MEDIATES A 1:1 EXCHANGE OF INORGANIC ANIONS ACROSS THE MEMBRANE,
WHEREAS ITS CYTOPLASMIC DOMAIN PROVIDES BINDING SITES FOR
CYTOSKELETAL AND OTHER PROTEINS (BY SIMILARITY).

-1 SUBUNIT: A DIMER IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY
AND APPEARS TO BE TETRAMERIC (BY SIMILARITY).

-1 SUBCELLULAR LOCATION: Integral membrane protein.
-1 SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transmembrane; Glycoprotein; Anion exchange; Lipoprotein; Palmitate.

-! TISSUE SPECIFICITY: Isoform a is widely expressed at similar levels in all tissues examined. Isoforms bl and b2 are predominantly expressed in stomach although they are also detected at lower levels in other tissues. Isoform c1 is stomach-specific. Isoform c2 is expressed at slightly higher levels in lung and stomach than in other tissues.
-! SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -> MDFLLRPQ (in isoform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Transmembrane; Glycoprotein; Transport; Antiport; Ion transport; Anion exchange; Lipoprotein; Palmitate; Alternative splicing. Blochim. Biophys. Acts 980:291-298(1989).
FUNCTION: BAND 3 IS THE MAJOR INTEGRAL GLYCOPROTEIN OF THE EXTTHROCYTE MEMBRANE. BAND 3 HAS TWO FUNCTIONAL DOMAINS. ITS INTEGRAL DOMAIN MEDIATES A 1.1 EXCHANGE OF INORGANGIC ANIONS ACROSS THE MEMBRANE, WHEREAS ITS CYTOPLASMIC DOMAIN PROVIDES BINDING SITES FOR CYTOSKELETAL PROTEINS, GLYCOLYTIC ENZYMES, AND
                                                                                                                                                                                                                                                                                                            SUBGNIT: A DIMER IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY SUBCELLULARS TO BE TETRAMERIC.
SUBCELLULAR LOCATION: Integral membrane protein.

A C;Comment: Band 3 has at least two functional domains. Its integral domain mediates ing sites for cytoskeletal proteins, glycolytic enzymes, and hemoglobin.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
